INDUCTION SYMBOL

How To Test Your Cookware For Compatibility

Magnet Test:

Grab a fridge magnet and see if it sticks to the bottom of the pan or pot. If the magnet adheres, then the cookware compatible

Battery Powered Induction Tester

Buy a small handheld induction tester and place the pan on the tester and see if it gets hot. If so, then the pan will work on an induction burner.

Stovetop Test

If you have access to an induction cooktop, place the pan on a burner set to a medium heat level. If the pan heats up within 30-60 seconds, then induction compatibility is confirmed.

Check Product Details

Review the product description, packaging or manufacturer website details of your existing pots and pans. Compatible materials like stainless steel or cast iron should be highlighted. The induction ready symbol may also be displayed.
